Specification:	6x Blue DNA Gel Loading Dye is pre-mixed loading buffer with a tracking dye for agarose and non-denaturing polyacrylamide gel electrophoresis. This solution contains EDTA that binds divalent metal ions, inhibits metal dependent enzymatic reactions and protects DNA from metal dependent nucleases, effectively inactivating enzymes and protecting DNA from nucleases. The loading dyes increase the density of the sample and they add colour to the sample, thereby simplifying the loading process. The optimized 6x Blue DNA Loading Dye contains one electrophoresis tracking dye: bromophenol blue. Bromophenol blue migrates at approximately 300 bp on a standard 1% TAE or TBE agarose gels.
